Download Java for Mac OS X

Recommended Version 7 Update 65 (filesize: 48.5 MB)

Chrome does not support Java 7 on Mac OS X. Java 7 runs only on 64-bit browsers and Chrome is a 32-bit browser.

If you download Java 7, you will not be able to run Java content in Chrome on Mac OS X and will need to use a 64-bit browser (such as Safari or Firefox) to run Java content within a browser. Additionally, installing Java 7 will disable the ability to use Apple Java 6 on your system.

I understand the above and want to download Java 7 for Mac OS X (10.7.3 and above).
